

## Q&A Guidelines :-

- All the mathematical terms like(a, b, 1, 2, ..) and expressions, equations should be typed using MathType software. Use this link to install math type software and watch youtube to see how to use it.
- Use **Desmos** graphic calculator to draw the graph.
- Use TimeNewRoman size 12 with 1.15 spacing don't change the it.
- The answer word file must have the same name as question. Just remove the "Question".Example if the question file name is "xyx-ab.c-1CBC-Question" than the answer file name should be "xyx-ab.c-1CBC".
- Never use a same word as any of the solution tags(Determine, answer, explanation ) avoid using these words strictly and use some synonyms.

Go through the sample answers for each type of questions that you want to solve and just see the language starting from <!--<**TO-DETERMINE**>-->( write here,what is asked in the question not complete question), <!--<**ANSWER**>-->( write only final here)

<!--<**EXPLANATION**>-->( detailed explanation )

Same tag will be different in case of different subjects for CSE it will like this:-

<!--<**PROGRAM-PLAN-INTRO**>-->

<!--<**PROGRAM-DESCRIPTION-ANSWER**>-->

<!--<**PROGRAM-EXPLANATION**>-->
